PROFESSIONAL SUMMARY

Full-Stack Developer specializing in scalable web applications using the MERN stack, TypeScript, and modern Node.js ecosystems. Experienced in designing secure RESTful APIs, implementing robust authentication workflows, optimizing MongoDB aggregation pipelines, and integrating payment/media cloud services. Backed by a strong foundation in Data Structures & Algorithms, System Design, and core Computer Science fundamentals.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C++, SQL (PostgreSQL), HTML5, CSS3

Full-Stack: Node.js, Express.js, React.js, RESTful APIs, JWT, HTTP-only Cookies, Bcrypt, MVC Architecture, Multer, WebSockets, Redis, Docker

Frontend UI: React Router, Context API, Tailwind CSS, Vite, Responsive UI Design

Databases & Cloud: MongoDB, Mongoose (Aggregation, Indexing), PostgreSQL, Cloudinary, Stripe Payment Gateway

Tools & Core CS: Git, GitHub, Postman, Linux/Git Bash, VS Code, Data Structures & Algorithms, OOP, DBMS, Operating Systems

PROJECTS

Vidyora – Full-Stack Video Streaming & Social Platform | Live Demo | GitHub

Tech Stack: React 19, Vite, Node.js, Express 5, MongoDB, Mongoose, Cloudinary, JWT, Tailwind CSS

- Architected a feature-rich video streaming platform supporting video publishing, real-time search, likes, playlists, subscriptions, watch history, and nested comment threads across 15+ REST endpoints.
- Implemented enterprise-grade authentication utilizing bcrypt password hashing and secure JWT transmission via HTTP-only cookies, eliminating token exposure vulnerabilities.
- Integrated seamless multipart media pipelines using Multer and Cloudinary, successfully debugging complex Axios Content-Type header conflicts during high-concurrency uploads.
- Designed advanced MongoDB aggregation pipelines and compound indexing strategies to optimize channel feeds and user engagement queries.
- Refactored frontend architecture utilizing React Context, custom hooks, and a centralized service layer, while resolving React Strict Mode lifecycle bugs and view-count duplication issues.

MERN Grocery & E-Commerce Platform | Live Demo | GitHub

Tech Stack: MongoDB, Express.js, React.js, Node.js, Stripe API, JWT, Tailwind CSS

- Developed an end-to-end full-stack e-commerce solution featuring strict role-based access control (Admin vs. Customer), real-time cart synchronization, and complete order lifecycle tracking.
- Integrated Stripe payment gateways with secure webhook listeners to asynchronously verify transaction states and finalize order confirmation flows.
- Engineered robust Mongoose database schemas integrated with pre-save validation hooks to maintain inventory integrity and prevent data anomalies.

EDUCATION

Ajay Kumar Garg Engineering College (AKGEC), Ghaziabad, India

Bachelor of Technology (B.Tech) in Computer Science & Engineering | Expected Graduation: June 2028

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Object-Oriented Programming

PROBLEM SOLVING & ACHIEVEMENTS

- Active LeetCode Problem Solver focusing on arrays, two-pointer techniques, recursion, sorting algorithms, and data structures.
